

GOLDPHOS

12%
SULPHUR

SOLVE THE SULPHUR PROBLEM THIS WINTER CROPPING SEASON WITH GOLDPHOS

This compound granule contains 12 percent sulphur and is ideal for sulphur hungry crops such as cereals, oilseed and pasture.

Every **Goldphos** granule contains nitrogen, phosphorus and sulphur. This ensures uniform distribution and better nutrient uptake.

Every **Goldphos** granule contains nitrogen, phosphorus and sulphur. This ensures uniform distribution and better nutrient uptake.

Why Goldphos is better

- With **Goldphos's** compound nutrient granule technology, all fertiliser components are supplied in one granule for even nutrient distribution in the field.
- A single compound granule prevents segregation issues during transportation, compared to blends.
- The hard, free flowing **Goldphos** granules are suitable for air seeder application.
- **Goldphos** contains Sulphate Sulphur (5 percent) allowing immediate plant uptake and Elemental Sulphur (7 percent) available later in the growing season after oxidation.
- **Goldphos** is an ideal starter fertiliser for use on most crops, including cereals, oilseeds and pastures.

Typical Analysis	N%	P%	S%
Goldphos	11	17.5	12 (Sulphate 5% Elemental Sulphur 7%)

Blending

- **Goldphos** can be blended with other fertiliser products to create specific nutrient blends.
- Prescription blends are available to suit individual requirements.
