

Tunza Cotton

Tunza® Cotton is a pre-plant or planting fertiliser designed for cotton.

Typical Analysis	N	P	K	S	Zn
Tunza Cotton	5.5%	11.9%	22.5%	1.1%	0.55%

Tunza Cotton provides an all-around base planting mix for high yielding cotton crops. Key nutrients are supplied to ensure that after seed germination the plant has access to essential nutrition to develop a strong root system. High yielding cotton crops are reliant on having the ability to readily access water and nutrients supplied through a vigorous root system which can only occur through a balanced fertiliser base.

This formulation results in very even distribution of Zinc along the row as Zinc is contained in every Nitrogen and Phosphorus granule. Potassium is included to meet the crop's requirement for Potassium during flowering and boll fill.

Nutrient Applied at Various Application Rates:

Rate kg/ha	N kg/ha	P kg / ha	K kg / ha	Zinc kg/ha
91	5	11	21	0.5
182	10	22	41	1.0
273	15	33	61	1.5

Where specific nutrition needs are required, Prescription Blends can be based on Tunza Cotton to boost individual nutrients.

Agromaster® can also be blended with Tunza Cotton to provide controlled Nitrogen release for three months after application.
